

## What is POS Collect?

A newly created tab in POS, "Collect" provides Operators with the capability to automatically process service fees when a commercial arrangement with the respective member is in place.

This enhancement will streamline commercial transactions, ensuring a seamless process for both parties and reducing the administrative burden for Operators.

The Collect feature is optional and can be enabled on a per-device basis through your POS device settings.

## What do I need to start using this new feature?

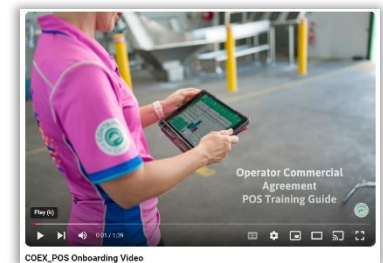

Operators who choose to utilize the POS Collect feature within POS will have the commercial arrangement details uploaded into a secure, self-service portal.

These details will then be automatically fed into your POS device, available within a few moments, after you have synced the POS.

## Registering your commercial arrangements

Please contact your network lead or [networklead@containerexchange.com.au](mailto:networklead@containerexchange.com.au) if you would like to a unique login to access the Operator Self-Service Portal to start using the Collect feature.
