

# Container Exchange Points

Container Exchange Points are installed in public spaces for pedestrians to place empty containers into these instead of discarding them into general waste bins.

Container collectors can then safely collect the containers and return them to receive a refund that would have otherwise (literally and figuratively) gone to waste.

# Types of Container Exchange Points

**Horizontal (Aluminium)**

**Basket  
(Aluminium)**

**Vertical  
(Aluminium)**

**Vertical  
(Recycled Plastic)**
